Actolind® w Gel

Actolind® w Gel is a protection, care and moisturising product for acute, chronic and infected wounds as well as 1st and 2nd degree burns.

The ideal partner to **support** an easy and pain-free wound care!

Effective

Protection, care and moisturising of poorly-healing wounds. Effectively removes dirt, slough, necrotic tissue and biofilms

Supportive

High biocompatibility, inhibits neither granulation nor epithelialisation

Patient-friendly

Easy and pain-free wound management for acute, chronic and infected wounds

Dermatologically tested

The formulation of poloxamer and polyhexanide (PHMB) offers **effective wound care**

Protective

Highly effective against multidrug-resistant organisms (MRSA, VRE) and mycotic pathogens (C. albicans)

Gentle

High biocompatibility, suitable for long-term treatments, well tolerated by allergy sufferers and diabetics

Healing

Supports antiseptic cleansing of wound and periwound, prevents reinfection

Indications

- Infected or uninfected acute wounds
- Infected or uninfected chronic wounds
- Infected or uninfected thermal or chemical wounds (e.g. 1st and 2nd degree burns, chemical burns, etc.)
- Wounds caused by electrical current
- Radiation wounds
- Entry regions of urological catheters
- Maintenance of peristomal skin, fistulas and abscesses
- To create a barrier between the wound and the dressing, to prevent drying out and sticking.

Application Recommendations

- **Actolind® w Gel** protects and moisturises the wound surface.
- Forms a protective film layer between the wound surface and the dressing and prevents the adhesion of pathogenic microorganisms on the wound surface mechanically.
- **Actolind® w Gel** protects the wound from external influences by forming a thin protective layer on the wound surface. It fills the gap between wound surface and wound dressing and thus increases the effectiveness of the dressing but also prevents the adhesion of the dressing material to the wound.

“Compatible with all modern wound dressings”
